EDUCATION

University of Calgary Calgary, AB
Bachelor of Science December 2024
Major in Computer Science; Concentration in Software Engineering
Cumulative GPA: 3.5/4.0; Dean's List 2023-2024
Relevant Coursework: Software Architecture, Software Testing, Web-Based Systems, Design and Implementation of Database Systems, Data Structures & Algorithms, Design and Analysis of Algorithms, Operating Systems

WORK EXPERIENCE

TELUS Digital AI Data Solutions Remote
Data Analyst June 2026 – Present

- Evaluated search relevance across assigned TELUS rating tasks by analyzing user intent, result accuracy, page quality, and usefulness against project guidelines
- Reviewed AI-generated text responses across daily evaluation tasks by rating factual accuracy, instruction following, completeness, clarity, and natural language quality
- Classified search and content quality issues such as irrelevant results, misleading information, unsafe content and poor query matching

Ramis Associates Remote
Data Engineer May 2026 – Sept 2026

- Engineered a Microsoft Fabric medallion architecture for IBM Db2 data by using Azure Data Factory to ingest source tables into OneLake, enabling structured Bronze, Silver, and Gold lakehouse processing
- Built metadata-driven ADF pipelines using parameterized source queries, dynamic sink paths, table configuration metadata, and watermark-based logic, reducing manual pipeline duplication across source tables
- Landed raw Db2 extracts into the Bronze layer in Parquet format, preserving source-aligned data structures while enabling scalable downstream transformation in Microsoft Fabric
- Transformed Bronze data into Silver Delta tables by applying schema standardization, column normalization, data type enforcement, deduplication, null handling, and incremental merge logic to improve data quality and consistency.
- Developed Gold analytical tables from curated Silver datasets using joins, aggregations, business rules, and dimensional modeling patterns, enabling Power BI-ready reporting outputs
- Implemented audit logging and table-level error handling across ingestion and transformation workflows, improving observability into load status, watermark values, execution timestamps, and failure details

Dimension Rex (MTA:SA) Remote
Software Developer Mar 2025 – Jan 2026

- Architected and maintained a real-time multiplayer game server in Lua, implementing core gameplay systems (clans, duels, combat) using event-driven client–server architecture
- Designed a map streaming system using spatial partitioning and interest management, reducing bandwidth usage and improving client performance through batched network events
- Integrated Discord API via a Node.js service to enable real-time communication and event synchronization between in-game players and Discord channels
- Developed custom real-time rendering and UI systems (radar, HUD, dynamic overlays), optimized for low-latency updates and smooth client performance
- Deployed and managed production infrastructure on a Linux VPS (OVH), configuring Nginx for asset delivery and supporting monetization through in-game purchases
- Scaled and supported a live player base of 17,000+ unique users, ensuring stability, performance, and continuous feature delivery

University of Calgary Calgary, AB
Backend Developer and Undergraduate Researcher Jan 2024 – Apr 2024

- Engineered a volumetric live-streaming system in Node.js, increasing frame rate from ~30 FPS to ~38 FPS (~25% improvement) through performance benchmarking and targeted optimizations
- Identified and resolved performance bottlenecks, improving overall system efficiency

- Leveraged Docker containers for platform independence, ensuring seamless deployment across environments
- Designed a modular architecture, enabling scalability and future enhancements
- Authored a research paper documenting findings and improvements

University of Calgary Calgary, AB
Undergraduate Researcher (Team Lead) Jan 2023 – Apr 2023
- Developed a machine learning model in Python using decision trees & information gain to analyze student feedback
- Generated data-driven course recommendations, improving decision-making for students
- Enhanced student satisfaction by providing personalized insights based on feedback analysis

PERSONAL PROJECTS

Data Lens
- Built an AI-powered data quality platform with React, FastAPI, Polars, and DuckDB for automated profiling and transparent, rule-based quality scoring
- Integrated LLM-generated insights and natural language-to-SQL with query validation and automated SQL repair for dataset exploration
- Extended backend services through a Model Context Protocol (MCP) server, enabling AI assistants to discover and inspect datasets through four read-only tools
- Containerized the application with Docker and developed automated tests covering profiling accuracy, SQL validation, and MCP integration with input and filesystem access controls

Construction Time Prediction
- Built an end-to-end machine learning pipeline using Python and CatBoost to predict residential construction timelines from 4,600+ historical builds
- Cleaned inconsistent data, engineered predictive features, and designed leakage-aware temporal validation against global and floor-plan baselines
- Achieved a 33.2-day MAE, improving accuracy by 34.6% over the global baseline and 9.8% over the floor-plan baseline

AI Benchmarking
- Built a multi-provider AI benchmarking platform for OpenAI, Claude, and Gemini, supporting head-to-head coding and natural-language evaluations with blind judging
- Developed a LeetCode-style execution pipeline with custom test cases, sandboxed Python/Node execution, and objective winner selection based on pass rates
- Built a React interface with Google OAuth/JWT, side-by-side results, judge reasoning, and token, latency, and cost metrics

Rycho
- Built a React TypeScript application integrating Spotify API & MongoDB, enabling users to stream, share, and post music
- Implemented social features like commenting and following, enhancing user engagement with music-focused interactions

VOLUNTEER AND LEADERSHIP

Career Fair (University of Calgary) Calgary, AB
Event Volunteer Nov 2023 & Jan 2024
- Volunteered at two different occasions where I facilitated smooth event operations by assisting in the registration of over 400 attendees and supporting over 50 employers in setting up their stalls, enhancing organizational and interpersonal skills

Spring Convocation (University of Calgary) Calgary, AB
Guest Services Volunteer May 2023
- Ushered over 500 guests at the Faculty of Science 2023 Spring Convocation, ensuring adherence to seating arrangements and enforcing presentation protocols, while developing skills in the event coordination, tactful communication, and crowd management

ADDITIONAL

Programming: SQL, Java, JavaScript, Python, PHP, HTML/CSS, TypeScript, C, LUA
Databases: MySQL, PostgreSQL, MongoDB, DuckDB
Frameworks: React.js, Next.js, Node.js, .Net, FastAPI, Docker, Polars
Languages: Fluent in English, Urdu; Conversational Proficiency in Punjabi
Certification: Amazon Web Services (AWS) Certified Cloud Practitioner
